Technical Skills

Cloud Platforms: AWS
DevOps Tools: Git, CI/CD, Jenkins, Terraform, Ansible, Docker, Kubernetes, Grafana, Prometheus
Programming: Python
Operating Systems: Windows, Linux
Soft Skills: Proactive, Communicative, Disciplined, Dynamic, Insightful, Strategic, Time-Efficient, Competitive

Work Experience

Intern DevOps Engineer | Shiwansh Solutions **Aug 2025 – Nov 2025**

- Implemented CI/CD, containerization, and infrastructure automation, along with better observablity and security practices providing efficient and high-quality DevOps solutions.
- Designed, built, and maintained Jenkins CI/CD pipelines for ***shiwansh.com***, ***ems.shiwansh.com***, and ***ssinterns.shiwansh.com***, automating the build, test, and deployment of Dockerized backend APIs and React frontends to streamline releases and improve developer productivity.
- Set up and configured infrastructure for Jenkins deployment and end-to-end application rollout for a US-based insurance platform, establishing a scalable, secure, and reliable CI/CD environment for production-grade delivery.
- Spearheaded end-to-end observability for a global e-commerce lingerie platform, using OpenTelemetry and sidecar containers to capture and analyze logs, metrics, and traces, enabling real-time performance insights and proactive issue resolution.
- Implemented automated rollback mechanisms and zero-downtime deployment strategies across multiple SaaS platforms, ensuring uninterrupted service availability and smooth release cycles

Personal Projects

Project 1: Book Store OTEL App with Observability
• Built a Node.js Book Store app with PostgreSQL backend.
• Orchestrated app, DB, and observability stack using Docker Compose.
• Integrated OpenTelemetry for tracing, metrics, and logs; visualized via Prometheus, Loki, Grafana.
• Implemented APIs for book listing, ordering, and inventory with structured logging.

Project 2: Automated Web App Deployment (Terraform, Ansible, Jenkins)
• Provisioned AWS infra (VPC, subnets, EC2, load balancer) with Terraform.
• Automated server setup & app deployment via Ansible; dynamic inventory from Terraform outputs.
• Built Jenkins CI/CD pipeline for end-to-end automation from infra provisioning to app rollout.

Project 3: AWS Auto Scaling & Load Balancing
• Simulated high traffic on EC2 to validate Auto Scaling and ALB setup.
• Configured CloudWatch alarms to trigger scaling based on CPU utilization.
• Built secure custom VPC and subnets; validated automatic scaling and traffic distribution under load.

Education

Mandsaur University , *Mandsaur , Madhya Pradesh* **Aug 2021 – Jun 2025**
Bachelor of Computer Application (BCA)
